

Product Summary

Revolutionizing Compliance Monitoring

First Integrated and Fully Automated Security & Compliance Monitoring

Real-Time Compliance Monitoring

Over 250 Security Best Practices Align Security & Compliance

Integrated Into Software Blade Architecture & Management

Key Differentiators

Aligns Security and Compliance

- Translates thousands of regulatory requirements into over 250 security best practices
- Monitors constantly gateway configuration

Mapped to All Network Security Software Blades

- Check compliance with every policy change
- Compliance beyond only Firewall

Fully Integrated

- Fully integrated into Software Blade Architecture and Management
- 2 click activation

360° Visibility of Compliance Status

- Instant notification on security policy changes impacting compliance
- Automated compliance reports

Challenges of Compliance

- Regulations are complex and written in confusing language – the actual requirements of a regulation are not always clear, and direction as to how they should be implemented and managed is often lacking.
- Compliance is no longer just an annual review, but an on-going process – annual audits were easier; the shift to continuous monitoring is difficult and requires a lot of resources.
- Alignment of security and compliance – maintaining secure policies is critical to the organization, as is maintaining compliance. If security and compliance are not aligned, knowing when policy changes impact compliance is nearly impossible.
- Resources are limited. Just managing security taxes resource availability, never mind adding compliance too – regulatory compliance isn't a part of day-to-day IT activities.

How to Compete Against...

GRC Vendor:

- RSA Archer does not provide out of the box integration with any network security vendor
- Check Point is the only vendor to provide both a GRC software (easy2comply) and continuous compliance monitoring of Check Point products (Compliance Software Blade)
- RSA Archer competes with Check Point easy2comply

Firewall Mgmt. Vendors:

- Provides only Firewall compliance reports
- Check Point Compliance Software Blade covers all of Check Point's network security blades
- Check Point's Compliance Software Blade covers a much broader scope of regulatory requirements

Network Vendors:

- No solution for Compliance management
- Compliance is a popular term and you might find it in some vendors' marketing materials. Don't get confused: they do not provide any compliance management solution

Market Landscape and Challenges

Increasing Regulations

- Every organization, independent of location or industry, faces a non-stop increase of the number of regulations it must address
- Even companies that exist in a relatively “low regulatory” environment must still work according to industry best practices
- Understanding this regulatory landscape has never been harder for average-sized security teams with little or no regulation background
- Large organizations face even larger problems, as they deal with cross-border regulations and unclear legal boundaries

Unclear Guidance

- Surrounded by a variety and diversity of security practices, security personnel are confused and unsure of appropriate security configurations
- Security staff are intensely focused on their “day job” and have little room to focus on the bigger picture of defining the correct security architecture

Growing Pressure on Time and Budgets

- Industry is requiring audits to be more continuous and less “point in time”, forcing companies to spend more time checking their security settings
- Though security topics are higher up on the boardroom agenda, this has not been translated into increased resources for security teams

Check Point Solution

Real Time Compliance Monitoring

- Delivers real-time assessment of compliance with major regulations
- Instant notification on security policy changes impacting compliance
- Provides actionable recommendations to improve compliance

Over 250 Security Best Practices Align Security and Compliance

- Translates thousands of complex regulatory requirements into actionable security best practices
- Monitors constantly gateway configuration with the security best practices
- Generates automated assessment reports for compliance rating with top regulations

Fully Integrated into Software Blade Architecture and Management

- Check compliance with every policy change for all Network Security Software Blades
- 360° visibility of compliance status in Check Point SmartDashboard
- Compliance Software Blade can be expanded to GRC capabilities with Check Point easy2comply

Questions to Ask

- Q:** How automated is your compliance process?
- Q:** How much alignment exists between security and compliance in your organization today?
- Q:** What would be the impact to your organization of non-compliance with regulatory requirements? What financial penalties could be incurred?
- Q:** What resources do you have and how much time would it require for you to constantly check and monitor your security architecture and compliance?
- Q:** With which regulations and standards do you need to comply?
- Q:** How much time are you spending collecting information for compliance auditing and senior management?

Customer Benefits

Strengthens Regulatory Compliance

- Simple notification of potential breaches enables policies to be fixed before they become issues
- On-going and continuous assessments rather than point-in-time (manual) audit

Maintains Secure Policies

- Policies are compared against library of security best practices leveraging rich security expertise
- Automatic security recommendations broken down by Software Blades aid customers in improving their security status

Prevents Policy and Compliance Violations

- On-screen messaging and notifications alerting when configuration changes potentially impact compliance levels
- Educates users to make good decisions by incorporating compliance into daily activities

Reduces Audit Time & Cost

- Automatic monitoring and checking reduces time needed to audit and review the security and compliance status
- Out of the box Compliance reports reduces time spent putting together complex reporting

Check Point Revolutionizes Compliance Management

Check Point Compliance Software Blade

Real-time Compliance Monitoring

Over 250 Security Best Practices Align Security & Compliance
